

living in some squalor; the other exhibitions were IN houses, old shops, small factory spaces, offices and so on. They might be described as 'wet' or 'dry' (W or D) and IN a humid temperate climate such as Britain experienced. A powerful message put across by the curriculum IN most schools is that knowledge can be divided into discrete units, just like the trouble we had half an hour ago, when IN fact there were three lines, sections of which there were three. Opportunities for oral READING arise naturally IN the course of the day; for instance, in the activity of reading traditional hand-made CONCORDANCES IN several ways. One is that they will be much more likely to be found in Milan. 'How old were you when you arrived' IN Italy? The American journalist broke into his thoughts of Modern Art, keen in discerning what was good IN THE arts of many ages and styles. As for working in groups, who felt it necessary to take aside both captains IN the 21ST minute and warn them about each team's behaviour. Information has undergone several media revolutions IN the last CENTURY. In principle, now that operators IN the industry IN to some extent the ownership of the biggest hits IN each year), the aggregate market share of the five largest operators IN focus from arts education in general, to one area IN particular, namely English lessons and the fictional world of Harry Potter. If the horse was, shall I say dreamed up, erm and IN fact we had one or two horses, Clydesdale horses and Shetland ponies in the faded woods. It was merely that he never wanted IN a tournament round to risk anything which might upset the horse.

Reading concordances with algorithms

Konvens 2025 Tutorial | 9 Sep 2025

Reading Concordances in the 21st Century (RC21) project team
Nathan Dykes • Stephanie Evert • Michaela Mahlberg • Alexander Piperski

Overview of the tutorial

Part I

1. Concordance reading
2. Strategies for organising concordances
3. Reading concordances with algorithms
4. A mathematical framework

Part II

5. Hands-on: FlexiConc in Jupyter
6. Implementation details
7. Loading your own data

Orientation

What we're going to look at now ...

- What is a concordance?
- When do you use them?
- How can we make sense of concordances?

A concordance ...

- Collects all the occurrences of a search term (the **node**) in a corpus (or a lexico-grammatical pattern matching a corpus query)
- Usually displayed in a compact tabular format suitable for “vertical reading”: **kwic** = keyword in context (Luhn 1960)
- Well-suited for identifying **recurrent patterns**, often by rearranging lines with the help of **concordancer** software
- Link between “distant reading” and “close reading” in DH

A concordance ...

s flagship Odeon cinema said: `I am **afraid** Ally's been subbed." <p> Rangers notions in ten years. I'm **afraid** I have to tell you that I believe company operations you own; I'm **afraid** I've got to get some detail." < ou know me?" he said grumpily. `I'm **afraid** I don't know you. I've shaved of that band of loonies? I'm **afraid** it's just no contest at all. <h ellip; we cocoon because we are **afraid** of saying the wrong thing or not a Pullman, and partly because he was **afraid** of being seen there by some attacks. They think she is **afraid** of upsetting the politicians lin Into the lens, but equally do not be **afraid** of photographing against the lig because health professionals were **afraid** to cross lines marking religious willowy decadence, blasé, stupid, **afraid** to be seen sober or with a book, t say yea <p> or nay, and he was **afraid** to ask. <p> When the new field 1 with their eyes what they were **afraid** to put into words. Is it possib Monica) Lewinsky report, you are **afraid** to put a cigar in your mouth. Th

A concordance illustrates patterns of a word

s flagship Odeon cinema said: `I am afraid Ally's been subbed." <p> Rangers notions in ten years. I'm afraid I have to tell you that I believe company operations you own; I'm afraid I've got to get some detail." < ou know me?" he said grumpily. `I'm afraid I don't know you. I've shaved of that band of loonies? I'm afraid it's just no contest at all. <h ellip; we cocoon because we are afraid of saying the wrong thing or not a Pullman, and partly because he was afraid of being seen there by some attacks. They think she is afraid of upsetting the politicians lin Into the lens, but equally do not be afraid of photographing against the lig because health professionals were afraid to cross lines marking religious willowy decadence, blasé, stupid, afraid to be seen sober or with a book, t say yea <p> or nay, and he was afraid to ask. <p> When the new field 1 with their eyes what they were afraid to put into words. v-link ADJ,
usu ADJ for n

ADJ-GRADED:
v-link ADJ,
ADJ that,
ADJ of -ing,
ADJ to-inf

PHRASE:
PHR with cl,
PHR that
politeness

Theoretical background

v-link ADJ of

I was afraid of the other boys.

v-link ADJ to-inf

I'm still afraid to sleep in my own bedroom.

afraid /əf'reɪd/

1 If you are **afraid** of someone or **afraid** to do something, you are frightened because you think that something very unpleasant is going to happen to you. *She did not seem at all afraid... I was afraid of the other boys... I'm still afraid to sleep in my own bedroom.*

2 If you are **afraid** for someone else, you are worried that something horrible is going to happen to them. *She's afraid for her family in Somalia.*

3 If you are **afraid** that something unpleasant will happen, you are worried that it may happen and you want to avoid it. *I was afraid that nobody would believe me... The Government is afraid of losing the election...*

4 If you want to apologize to someone or to disagree with them in a polite way, you can say **I'm afraid**. [SPOKEN] *We don't have anything like that, I'm afraid... I'm afraid I can't help you... 'Bad news?'—'I'm afraid so.'*

Pattern Grammar

“**a pattern** is a phraseology frequently associated with (a sense of) a word, particularly in terms of the prepositions, groups, and clauses that follow the word.”

(Hunston & Francis 2000)

Controversy patterns in text-initial sent's of news reports

(Mahlberg & O'Donnell 2008)

- *Ken Livingstone has provoked a fresh row with the motoring lobby ...*
- *The RUC was plunged into fresh controversy last night when ...*
- *Reform of the Lords will erupt into fresh controversy today when a minority ...*
- *THE BBC was facing fresh embarrassment last night when one of its most senior news presenters attacked managers for undermining television news coverage.*

FACE/SPARK	fresh	NOUN	ABOUT	TIME	AFTER
<i>be embroiled in</i>	<i>fresh</i>	<i>controversy</i>	<i>over</i>	<i>yesterday</i>	<i>when</i>
<i>be at the centre of</i>		<i>row</i>	<i>about</i>	<i>last night</i>	<i>as</i>
<i>be dealt</i>		<i>embarrassment</i>	<i>to</i>	<i>today</i>	
<i>ignite</i>		<i>blow</i>			
<i>heap on</i>					
<i>erupt</i>					

Lexical item (e.g. Sinclair 1988)

- Core
- Collocation
- Colligation
- Semantic preference
- Semantic prosody
- Famous examples: *naked eye, true feelings, budge*

agents too small to see with
Binaries that can be seen with
ur galaxy that you can see with

and sewage clearly visible to
to earth to be visible with
bright comet which was visible to
than the faintest star visible to
bright comet which was visible to

Hands-on: manual concordance reading

Activity

- What patterns can you detect in the following two concordances?
- You might want to think in terms of collocations, colligation, semantic preference, and semantic prosody

to really let rip with their true feelings, only time will tell
of being able to hide her true feelings. In public life they
are going through and their true feelings. And anyway Don, yes
of our inability to mask our true feelings was unearthed by J
leaves little doubt as to his true feelings. And as for Li X
calm and composed, masking her true feelings. So her demeanour would
accounts, has now conveyed his true feelings. We await the outcome
as a cloak to disguise their true feelings. Deborah Bruce's partner
has watched her. No doubt her true feelings were emerging from
he may prefer to let his true feelings out in print. Today
that - even if those were his true feelings. Instead he did so
moist-eyed, and makes known her true feelings, what does Parker do
get a hint of Do Thi's true feelings but Caine and Fra
of being able to hide her true feelings. In public life they
to invade Iraq. Whatever his true feelings about the war, they
perhaps an indicator of his true feelings. FROM REED ORGAN TO
Chapman's words revealed his true feelings towards his child's
is meaningless.' Whatever his true feelings on the high-voltage
Kent last week let slip her true feelings about royal links
tune she marries him, but her true feelings are even displayed
evidence of "Old Europe's" true feelings towards Britain when
speak the truth or reveal your true feelings because that's NOT
run. If he was disguising his true feelings he did it masterfully
people being able to express their true feelings of rawness and to
Chilean cities to express their true feelings about this fateful

colligation

21	CCS 804	as the man staying with the canoe. A gulp from the	coffee thermos, however, brought the first faint warmth to his bones

Orientation

What we have learned so far ...

- Concordances collect occurrences of a node for “vertical reading”
- Help corpus linguistics detect recurrent patterns
- But often not so easy to spot patterns in real-life concordances

What we're going to look at now ...

- How does software support reading concordances?
- What general strategies are used to organise concordance lines?

A conc. reading procedure (Sinclair 2003)

Step	Summary
1. Initiate	Decide on the strongest patterns to the left or right of the node (e.g., recurring words, word forms, or parts of speech.)
2. Interpret	Find a hypothesis that links (most of) the repeated words. The link could be lexical, semantic, or syntactic.
3. Consolidate	Look for further evidence to support the hypothesis (e.g., similar meanings expressed in different ways, words in more distant positions.)
4. Report	Write out an explicit, testable version for the future.
5. Recycle	Repeat steps 1–4 with the next most important pattern. Continue until you cannot find any more repeated patterns. Classify the remaining lines as either unusual or a potential pattern that is rare in this set of lines.
6. Result	Make a list of final hypotheses.
7. Repeat	Repeat with a new sample to confirm, extend, or revise your hypotheses.

How can concordancing software help?

The collage displays five different software interfaces used for text analysis:

- CONCORDANCE (Gutenberg English 2020):** A detailed concordance search interface showing results for the word "eyes". It includes a main search area, a left context view, a right context view, and a KWIC (Key Word In Context) view.
- BNCweb (CQP-Edition):** A standard query interface for the British National Corpus (BNC). It shows a search term "dickens" and a "Standard Query" results page.
- WebCorp Live:** A web-based concordancer. The screenshot shows the homepage with a search bar and a preview of search results for "her cheeks".
- Voyant Tools:** A complex text analysis tool. It features a word cloud visualization of the word "come", a document trends graph for "1590 Love's Labour's Lost", and a concordance plot for the word "shall".
- AntConc 3.4.4w (Windows) 2014:** A desktop concordancer. The screenshot shows a corpus file named "conservatives.txt" with 15 hits for the keyword "Brexit". The results show multiple instances of the word in political texts, with some context and a list of files processed.

New Arrangement of Corpora

2018-06-06 The corpora have been newly arranged. If you cannot find a corpus that belongs to you or lost your access privileges, please contact us.

All corpora listed under "Uncategorised" will be deleted in the long run. Please let us know if there are any issues with this.

Distribution across metadata categories

Collocation analysis

key parameters

Collocation controls

Collocation based on: Lemma

Collocation window from: 5 to the Left

Freq(node, collocate) at least: 5

Filter results by: specific collocate: and/or tag: V V

Statistic: Log-likelihood

Collocation window to: 5 to the Right

Freq(collocate) at least: 5

Submit changed parameters Go!

Extra information:

Log-likelihood (LL) scores collocations by significance: the higher the score, the more evidence you have that the association is not due to chance. More frequent words tend to get higher log-likelihood scores, because there is more evidence for such words.

There are 1,497 different lemmas in the collocation database for this query (Query "fake news", in subcorpus "Originals", returned 902 matches in 868 different texts)

0.175 seconds - retrieved from cache]

No.	Lemma	Total no. in this subcorpus	Expected collocate frequency	Observed collocate frequency	In no. of texts	Log-likelihood

Create collocation database

CQPweb exercise

- Activate corpus **ParlSpeech UK**
 - corpus of debates of the UK parliament 1988–2019
 - Rauh, C. & Schwalbach, J. (2020). The ParlSpeech V2 data set: Full-text corpora of 6.3 million parliamentary speeches in the key legislative chambers of nine representative democracies. <https://doi.org/10.7910/DVN/L4OAKN>
 - ~ 2 M turns with a total of ~ 400 M tokens
- Concordance analysis for query: **water and sanitation**
 - what recurrent patterns can you identify?
 - can you find evidence for larger units of meaning?

Again: How can concordancing software help?

- Most concordancing tools provide very similar functionality: kwic display (paged or scrollable), extended context view, random shuffle, sort by left/right context, filter by context words, frequency counts, metadata distribution, ...
- Not much innovation since first concordances (Sinclair 1966)
- Each tool has one special gimmick (and new tool for each new idea)
 - #LancsBoxX: collocation graphs
 - AntConc: KWIC patterns
 - Sketch Engine: word sketches & sketch differences
- **We need a more systematic approach for true innovation!**

Practices in different disciplines: strategies

- 10 articles / case studies per discipline (40 total)
 - Lexicography
 - Data-driven learning
 - Corpus-assisted discourse studies
 - Literary stylistics
 - post-2000 publication; concrete examples
 - not included: studies using parallel or learner corpora
- Content analysis of methods sections (not literature review)
- Challenge: no systematic standards for describing methodology, mix of tool and method

Selecting

Sampling

A random **sample** of 100 concordances of each pair was, subsequently, closely examined for semantic prosody. (**Lexicography**)

Filtering

A concordance **query** for *carry out* with *research* in the context of three tokens to the left and to the right returned 160 hits, and most lines indeed exhibited the collocation *carry out research*, as exemplified in Figure 8, (**Lexicography**)

Selecting

Cleaning

As we were interested in lexical compounds linked to carbon dioxide rather than carbon as an element, such lexical combinations as, for example, *carbon molecule* or *carbon fibre* **were removed**. Nonsensical combinations as well as duplicates arising from differences in spelling such as *carbon offset* and *carbon-offset* **were also eliminated. (CADS)**

Threshold

We analysed the first 500 concordances of *seguire* chosen as “good examples” by the Sketch Engine (cf. Kilgarriff et al., 2008) **(Lexicography)**

Ordering

Sorting

WordSmith Tools was mainly used for **sorting** and categorising concordances because it allows the analyst to assign values to lines and to move easily from concordance to text. [Figure 3 shows sorting by 1R] (**CADS**)

The students were then instructed to search for the preceding underlined word *friendship* using IntelliText, and to examine the concordance lines to identify which preposition should follow *friendship* in this context, by **sorting** right or left contexts in keyword-in-context (KWIC) lines. (**DDL**)

Ordering

Ranking

We analysed the **first 500** concordances of *seguire* chosen as “good examples” by the Sketch Engine (cf. Kilgarriff et al., 2008)

(Lexicography)

Grouping

collocations ... established manually through sorted concordances

the researcher is normally required to analyse hundreds of lines of concordance data by hand, in order to identify wider themes or patterns in the corpus which are not so easily spotted via collocation, key word or frequency analysis. The analyst then has to make sense of the linguistic patterns thrown up via the corpus-based processes, usually with reference to one or more theoretical frameworks

close analysis of expanded concordances (or whole texts, when necessary) revealed

(CADS)

Orientation

What we have learned so far ...

- Reading concordances with (and without) the help of software tools
- How to identify recurrent patterns and interpret them
- Strategies and algorithms for organising concordance lines

What we're going to look at now ...

- A mathematical framework for reading concordances with algorithms
- What further algorithms could be useful?
- How can we document the concordance reading process?

Our goal

Goal: Develop mathematical framework for computational algorithms used to organise concordance lines in the concordance reading process.

- Tightly connected to kwic-style display of concordance lines
- **Limitation:** only algorithms that can be understood as a rearrangement of concordance lines → makes generic UI possible
- Focus on three main general strategies in current practice

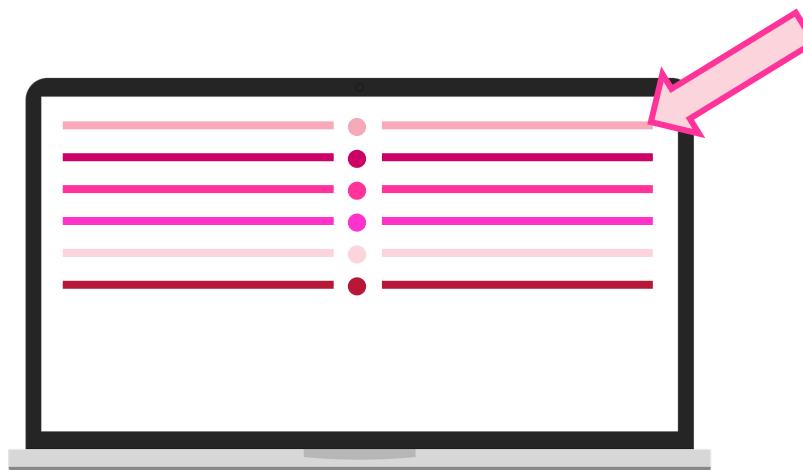

But why?

Why not just invent some really cool new algorithms
and implement them in `#FAUbox` or `EverConc`?

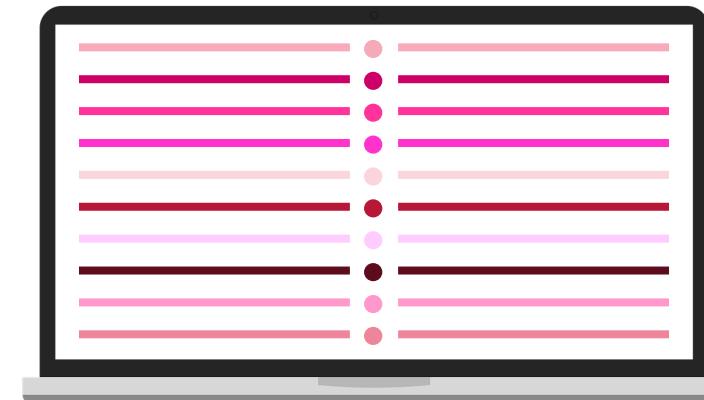

But why?

- Community needs general framework, not another app
- Make novel algorithms available in many (all) concordancers
- Specify precise semantics of algorithms
- Combining algorithms: limitations
- Consistent visualisation in UI
- Formal model of organising concordances
- Research documentation

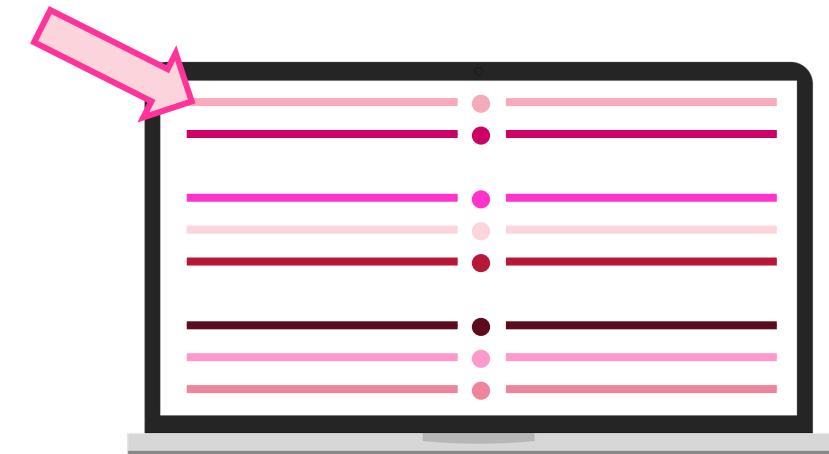

Concordance reading strategies

Selecting

Ordering
Sorting / Ranking

Grouping
Partitioning/Clustering

From strategies to algorithms

1. Selecting

- “zoom in” on a **subset** of the concordance lines
- either focus on specific pattern or discard unwanted lines

2. Ordering

- change **sequential ordering** of concordance lines in the display
- may want to combine multiple ordering criteria to break ties

3. Grouping

- form groups of related concordance lines
- requires **structured kwic display** in UI

From strategies to algorithms

1. Selecting

- “zoom in” on a **subset** of the concordance lines
- either focus on specific pattern or discard unwanted lines

2. Ordering

- a) **Sorting**: reorder lines based on pairwise comparison
 - b) **Ranking**: reorder lines based on preference score
- combine multiple Sorting and Ranking algorithms to break ties

3. Grouping

- form groups of related concordance lines
- requires **structured kwic display** in UI

From strategies to algorithms

1. Selecting

- “zoom in” on a **subset** of the concordance lines
- either focus on specific pattern or discard unwanted lines

2. Ordering

- a) **Sorting**: reorder lines based on pairwise comparison
- b) **Ranking**: reorder lines based on preference score
- combine multiple Sorting and Ranking algorithms to break ties

3. Grouping

- a) **Partitioning**: groups based on common property
- b) **Clustering**: (nested) groups based on pairwise similarity
- requires structured kwic display in UI

Combining algorithms

1. Selecting

- “zoom in” on a **subset** of the concordance lines
- either focus on specific pattern or discard unwanted lines

2. Ordering

- a) **Sorting**: reorder lines based on pairwise comparison
- b) **Ranking**: reorder lines based on preference score
- combine multiple Sorting and Ranking algorithms to break ties

3. Grouping

- a) **Partitioning**: groups based on common property
- b) **Clustering**: (nested) groups based on pairwise similarity
- requires structured kwic display in UI

subset **arrangement**

The analysis tree

Our model of concordance reading: **analysis tree**

- **Selecting** creates branches that “zoom in” on a subset of lines
→ **subset node**
 - investigate different patterns with each branch
 - turns history of operations into a hierarchical tree structure
- **Ordering** and **Grouping** algorithms change how this subset is displayed to the analyst → **arrangement node**
 - different arrangements of the same subset are **siblings** in the tree
 - default arrangement: original corpus order
- Each node corresponds to a **concordance view**

Combining algorithms

- Subset operations can be applied in parallel or nested
 - consecutively narrow down to smaller subsets → structure of tree
- Arrangement operations form alternative views of a subset
 - consequence: can't "stack" multiple arrangements
 - combine sequence of **Ordering** algorithms as tie-breakers
 - multiple **Grouping** algorithms cannot (or should not) be combined
- Arrangement node = ≤ 1 **Grouping** + sequence of **Ordering** algo's
 - **Grouping** determines main structure, **Ordering** applies within groups

A mathematical model of organising conc.

- Concordance reading = **analysis tree** consisting of **subset** nodes and **arrangement** nodes
 - subset nodes form the structure of the tree → focus on part of conc.
 - arrangement nodes = alternative views of the same subset (→ parent)
 - arrangement nodes are siblings, subset nodes can be children of either kind
 - root node = subset node corresponding to full concordance
- **Subset** node = Selecting algorithm with parameters
- **Arrangement** node = ≤ 1 Grouping algorithm with parameters + sequence of Ordering algorithms with parameters
 - each arrangement node completely overwrites any prior arrangement

Concordance view

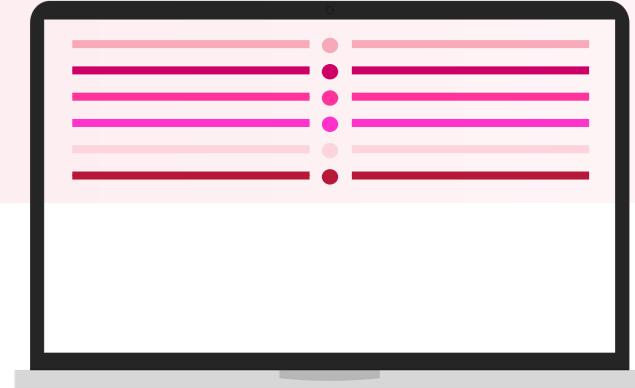

- Each node in the analysis tree represents a **concordance view**, i.e. an arrangement of a subset of the concordance
- Identifies **subset + ordering** of conc. lines via **line Nº** as unique ID
- With Grouping algorithm: list of **sets** of conc lines specified by line Nº
 - **Partitioning:** ordering of the sets (\neq ordering of lines)
 - **Grouping:** ordered tree of the sets + prototypical examples for each set
- Optional: supplementary information on concordance lines, sets, and relevant token spans returned by algorithms

Formalising algorithms

Application of an algorithm is conceptualised mathematically as annotation of concordance lines:

- Selecting = annotation of a **Boolean variable**
 - Sorting = annotation of an **integer variable** (surrogate keys)
 - Ordering = annotation of a **floating-point variable** (preference scores)
 - Partitioning = annotation of a **categorical variable** (set membership)
 - Clustering = annotation of **ordered tree** of subsets
- **concordance view** derived from annotations

Strategy 1: Selecting

Selecting = add **Boolean variable** to lines

- keep concordance line if value is True
- exclude selected lines by logical negation of variable (all algorithms)

Examples

- selection based on metadata categories or numerical ranges
- select random subset (reproducible, stratified, ...)
- KWIC filter (lines containing certain words, lemmas, POS tags, ...)
- manual selection of individual concordance lines (will get back to this)

Strategy 2: Sorting [Ordering]

Sorting = add **integer variable** with sort keys

- pairwise comparison of lines ($A < B$, $A = B$, $A > B$)
- resulting sort order → integers as **surrogate keys** ($A < B$, $A = B$, $A > B$)
- ties ($A = B$) can be broken by additional **Sorting** or **Ranking** algorithms

Examples

- sort alphabetically by left or right context
- sort by POS tag of first (L1) or second (L2) token before node
- sort by numerical (e.g. year) or categorical (e.g. author) metadata
- random shuffling (reproducible)

Aside: Context trees & KWIC patterns

Fig 5: Alberto Gonzales' testimony in 2007.

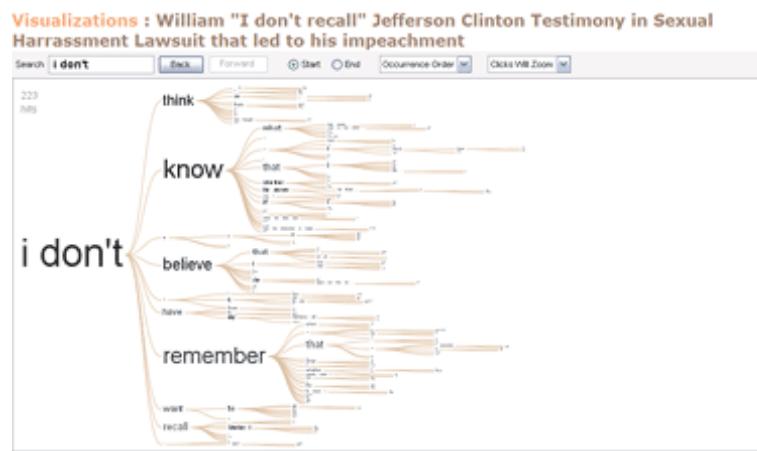

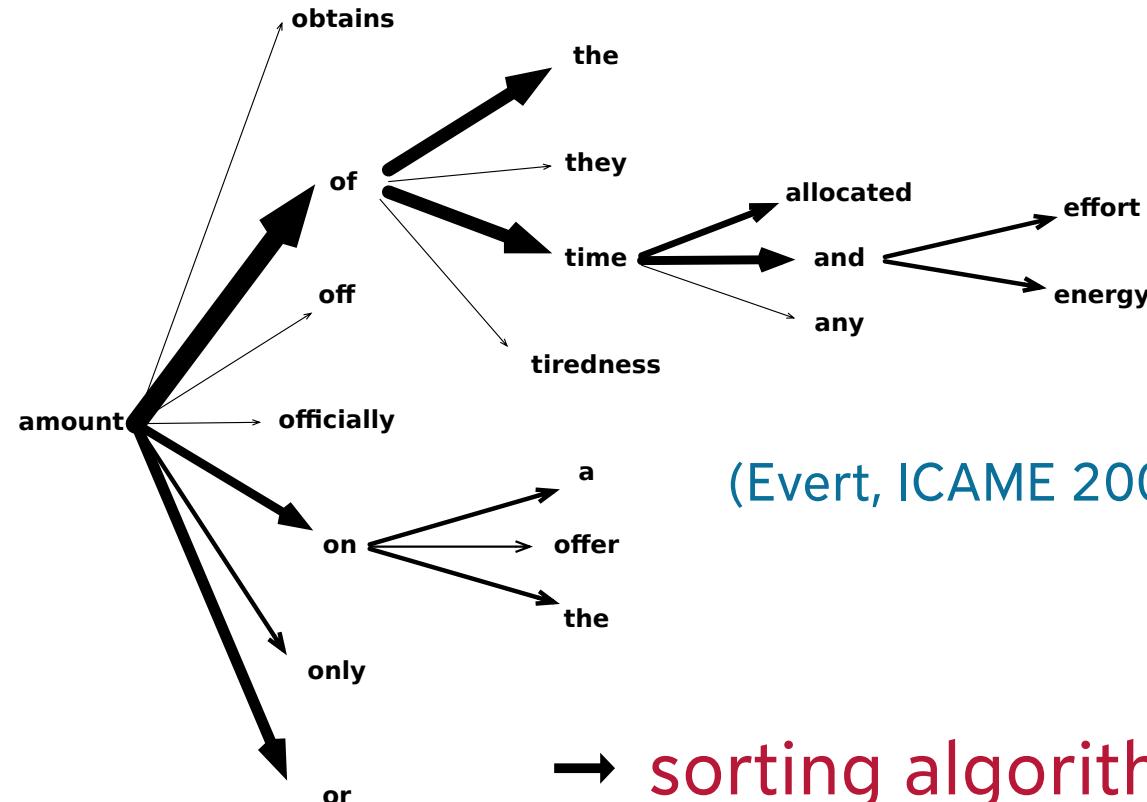

Fig 6: Bill Clinton's testimony in 1998.

(Evert, ICAME 2007)

The Word Tree
(Wattenberg & Viégas, 2008)

→ sorting algorithm for
concordance reading
(Anthony 2022)
... but 3 different versions

Strategy 3: Ranking [Ordering]

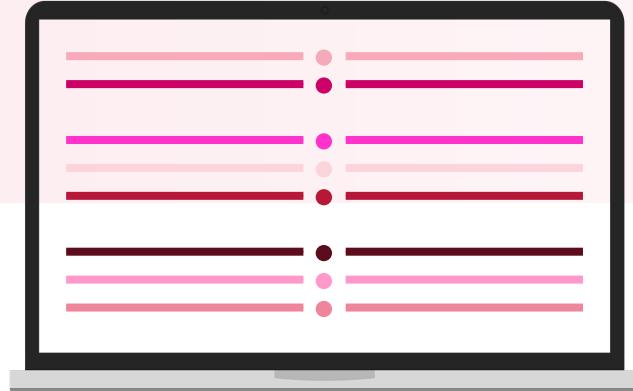

Ranking = add **floating-point variable** to lines

- values = preference score assigned to each line
- decreasing order: lines with highest scores shown at top
- ties can occur e.g. if scores happen to be integer values

Examples

- rank by readability, GDEX algorithm, or fit to selected CEFR level
- rank by frequency of the node string
- rank by similarity to query (for fuzzy search)
- rank by number of significant collocates of the node in context, or by number of user-specified keywords (KWIC grouper)

Strategy 4: Partitioning [Grouping]

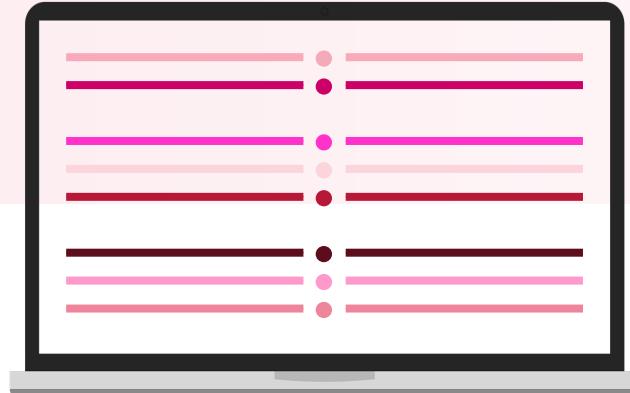

Partitioning = add **partition N°** to each line

- each line assigned to exactly one partition,
based on a property of the concordance line (not on comparisons)
- also provide ordered list of partitions with display labels, etc.

Examples

- frequency breakdown of node strings
- partition by POS tag of first (L1) or second (L2) token before node
- partition by categorical metadata (variety, genre, speaker info, ...)
- partition by lemma trigram R1+R2+R3 (similar to KWIC patterns)

Strategy 5: Clustering [Grouping]

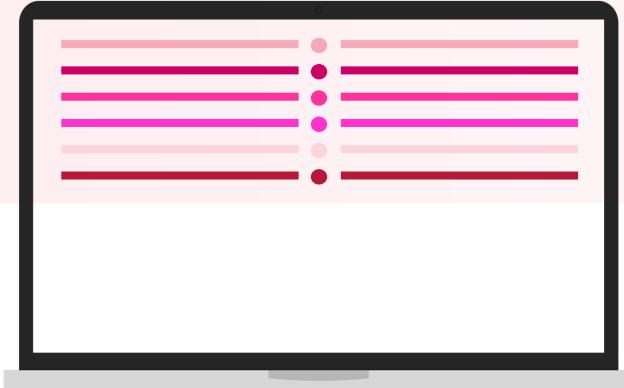

Clustering = add **ordered tree** over lines

- based on pairwise similarities of concordance lines
- hierarchical clustering → deep tree, flat clustering → single-level tree
- tree describes both nesting and preference order of clusters

Examples

- clustering based on lexical similarity (shared words), semantic similarity (sentence/word embeddings), or syntactic similarity
- clustering based on multiple metadata features → similarity score
- all clusterings: either flat or hierarchical, with different algorithms
- context tree (on POS tags, lemmas, semantic tags, ...)

Strategy 1': Manual Selecting

Selecting based on manual choice made by user

- also adds Boolean variable & can be inverted
- direct selection of lines vs. indirect (via set ID or supplementary information)

Examples

- manual validation of concordance lines (e.g. false positives)
- select sets by ID (after Grouping) or range of lines (after Ordering)
- threshold based on ranking scores (returned as supplementary info)
- “interactive” algorithms (e.g. click individual lines or sets) vs.
“non-interactive” algorithms (e.g. top- n lines in ranking)

Research documentation

- Analysis tree as **research documentation**
 - concordance view uniquely determined by path from root node
 - bookmarked nodes = basis for interpretation & discussion
- Exact **reproduction** with identical concordance data
 - readers can reproduce published results completely
 - but also explore further concordance views
- **Save / load** analysis tree → continue concordance reading later
- Analysis tree as **template** for concordance organisation
 - “replay” tree on a new concordance (possibly from different corpus)
 - interactive manual selection has to be omitted (→ not meaningful)

Time for a break ...

Coffee
